

ABSTRACT OF THE DISCLOSURE

A system and method for providing pharmacy services to a customer at a location where a live pharmacist is not available. The system includes a pharmacy kiosk computer system including a videoconference arrangement, a document scanner and a communication system, and a servicing pharmacy computer system remotely located from the pharmacy kiosk computer system and including a videoconference arrangement and a communication system. The pharmacy kiosk and the servicing computer are interconnected via their respective wired or wireless communication systems in a manner that enables a pharmacy service videoconference to be established between a customer located at the pharmacy kiosk and a live pharmacist at the servicing computer. Prescription, identification, insurance and/or payment information can be transmitted from the kiosk to the servicing computer in order to obtain pharmacy services.
